        setYaEjecutado(false);
       navigation.navigate('ModalCreate');
        <View style={styles.container}>
                keyExtractor={(item) => item.ID_Producto.toString()}
```

```
<TouchableOpacity style={styles.reloadButton}</pre>
onPress={fetchProducts}>
                    <Text style={styles.buttonText}>Recargar</Text>
                <TouchableOpacity style={styles.reloadButton}</pre>
onPress={handleCreate}>
                    <Text style={styles.buttonText}>Crear
Producto</Text>
};
const styles = StyleSheet.create({
        flex: 3,
        padding: 16,
    productDetails: {
    productItem: {
        justifyContent: 'space-between', // Asegura que los elementos
se distribuyan en el espacio disponible
        marginBottom: 8,
        padding: 8,
        backgroundColor: '#f0f0f0',
        borderRadius: 4,
    buttonContainer: {
        flexDirection: 'row', // Asegura que los botones se alineen en
        justifyContent: 'flex-end', // Alinea los botones hacia el
        alignItems: 'center', // Centra los botones verticalmente
    editButton: {
```

```
backgroundColor: 'gold',
       padding: 8,
       marginLeft: 8, // Añade un margen para separar los botones si
   deleteButton: {
       backgroundColor: 'red',
       padding: 8,
       marginLeft: 8, // Añade un margen para separar los botones si
   buttonTextEdit: {
       fontWeight: 'bold',
   buttonText: {
       fontWeight: 'bold',
    reloadButton: {
       padding: 8,
       alignItems: 'center',
       marginTop: 16,
export default Dashboard;
```

se agregaron botones y funciones de editar, eliminar y crear productos y se actualiza haciendo peticiones a la api en este mismo codigo se elimina
